Personal Cancer Genome Reporter (PCGR) (<https://sigven.github.io/pcgr/>)

Anaconda.org [2.3.2.9006](https://anaconda.org/pcgr/pcgr) (https://anaconda.org/pcgr/pcgr) Last updated [20 Sep 2026](https://anaconda.org/pcgr/pcgr) (https://anaconda.org/pcgr/pcgr)
images [2.3.2.9006](https://anaconda.org/pcgr/pcgr) | [2.3.2.9006.singularity](https://anaconda.org/pcgr/pcgr) (https://github.com/sigven/pcgr/pkgs/container/pcgr)

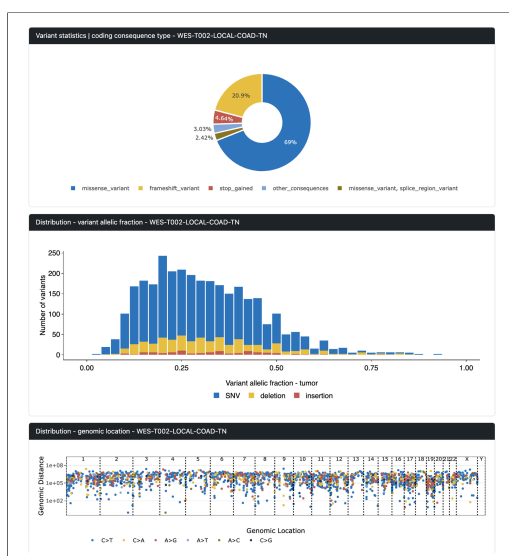

Overview

The Personal Cancer Genome Reporter (PCGR) is a stand-alone software workflow for functional annotation and translation of individual tumor genomes for precision cancer medicine. It interprets somatic SNVs/InDels and copy number aberrations, RNA fusions, and bulk RNA-seq expression data. The software classifies variants both with respect to *oncogenicity*, and *actionability*. Interactive HTML output reports allow the user to interrogate the clinical impact of the molecular findings in an individual tumor.

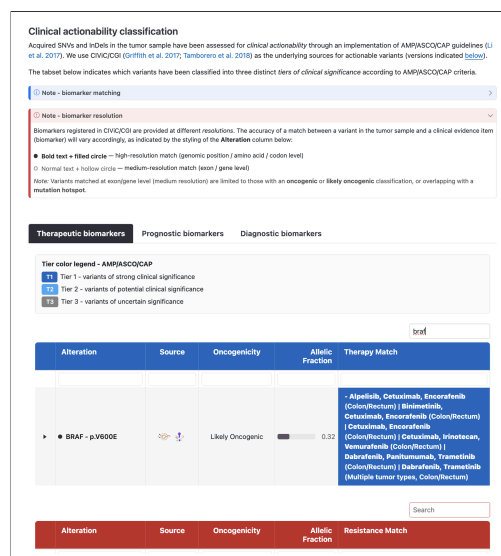

- Multi-omic data interpretation
- Variant classification
 - according to *oncogenicity*: evaluating the oncogenic potential of somatic DNA aberrations (VICC/CGC/ClinGen guidelines (<https://pubmed.ncbi.nlm.nih.gov/35101336/>))
 - according to *actionability*: mapping the therapeutic, diagnostic, and prognostic implications of somatic DNA aberrations (AMP/ASCO/CAP guidelines (<https://pubmed.ncbi.nlm.nih.gov/27993330/>))
- Tumor mutational burden (TMB) estimation
- Mutational signature analysis
- Microsatellite instability (MSI) classification
- RNA-seq support - gene expression outlier detection, sample similarity analysis, and immune contexture profiling

PCGR supports both of the most recent human genome assemblies (GRCh37/GRCh38), and accepts variant calls from both tumor-control and tumor-only sequencing assays. Much of the functionality is intended for whole-exome/whole-genome sequencing assays, but you can also apply PCGR to output from targeted sequencing panels. If you are interested in the interrogation of germline variants and their relation to cancer predisposition, we recommend trying the accompanying tool Cancer Predisposition Sequencing Reporter (CPSR) (<https://github.com/sigven/cpsr>).

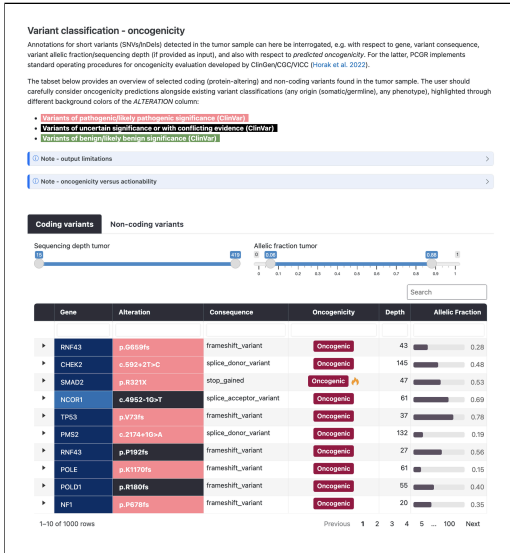

Example screenshots from the quarto (<https://quarto.org/>)-based cancer genome report by PCGR:

(https://github.com/sigven/pcgr/raw/main/pcgr/pkgsdown/assets/img/pcgr_variant_stats.png)

(<https://github.com/sigven/pcgr/raw/main/pcgr/pkgsdown/asse>)

(https://github.com/sigven/pcgr/raw/main/pcgr/pkgdown/assets/img/pcgr_oncogenicity.png)

(<https://github.com/sigven/pcgr/raw/main/pcgr/pkgdown/asse>)

PCGR originates from the Institute for Cancer Research, Oslo University Hospital, Norway (<https://radium.no>).

 - CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
- **October 11th 2024: 2.1.1 release**
 - patch to fix bug (<https://github.com/sigven/pcgr/issues/252>) with parsing of relative CDS start positions
 - CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
- **September 29th 2024: 2.1.0 release**
 - updated bundle, more oncogenic variants, CNA visualization, improved RNA-seq support, bug fixes, and more
 - CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
- **August 1st 2024: 2.0.3 release**
 - patch to fix purity/ploidy propagation, MAF output for tumor-only runs, and other minor issues
 - CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
- **July 16th 2024: 2.0.2 release**
 - patch to ensure correct reference to actionability guidelines
 - CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
- **July 7th 2024: 2.0.1 release**

- patch with bug fix for mitochondrial input variants (pr245 (<https://github.com/sigven/pcgr/pull/245>))
- CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
- **June 2024: 2.0.0 release**
 - Details in CHANGELOG (<https://sigven.github.io/pcgr/articles/CHANGELOG.html>)
 - Massive reference data bundle upgrade, new report layout, oncogenicity classification++
 - Support for Singularity/Apptainer
 - Major data/software updates:
 - Ensembl VEP v112
 - ClinVar (2024-06)
 - CIViC (2024-06-21)
 - GENCODE v46/v19 (GRCh38/GRCh37)
 - CancerMine v50 (2023-03)
 - UniProt KB v2024_03

Example reports

DOI: [10.5281/zenodo.20795653](https://doi.org/10.5281/zenodo.20795653) (<https://doi.org/10.5281/zenodo.20795653>)

Why use PCGR?

The great complexity of acquired mutations in individual tumor genomes poses a severe challenge for clinical interpretation. PCGR aims to be a comprehensive reporting platform that can

- systematically interrogate tumor-specific variants in the context of known therapeutic, diagnostic, and prognostic biomarkers
- highlight genomic aberrations with likely oncogenic potential
- evaluate complex biomarker readouts (MSI, TMB, mutational signatures, gene expression outliers)
- provide a structured and concise summary of the most relevant findings
- present the results in a format accessible to clinical experts

PCGR integrates a comprehensive set of knowledge resources (https://sigven.github.io/pcgr/articles/annotation_resources.html) related to tumor biology and therapeutic biomarkers, both at the gene, and at the level of individual variants. The software generates a comprehensive molecular interpretation report that supports the translation of individual cancer genomes towards molecularly guided treatment strategies.

Getting started

- Installation instructions (<https://sigven.github.io/pcgr/articles/installation.html>)
- Run through an example (<https://sigven.github.io/pcgr/articles/running.html#example-run>)
- Learn more about:
 1. Details regarding PCGR input files (<https://sigven.github.io/pcgr/articles/input.html>), and how they should be formatted
 2. Configuration of key settings (<https://sigven.github.io/pcgr/articles/running.html>)
 3. The types and contents of PCGR output files (<https://sigven.github.io/pcgr/articles/output.html>)
 4. Variant classifications implemented in PCGR (https://sigven.github.io/pcgr/articles/variant_classification.html)
 5. Primary tumor sites used in PCGR (https://sigven.github.io/pcgr/articles/primary_tumor_sites.html)
 6. The list of gene and variant annotation resources (https://sigven.github.io/pcgr/articles/annotation_resources.html) used in PCGR annotation
- Frequently asked questions (FAQ) (<https://sigven.github.io/pcgr/articles/faq.html>)

Citation

If you use PCGR or CPSR, please cite our publications:

Contributing

Contributions are welcome — bug reports, documentation improvements, feature suggestions, and code. See CONTRIBUTING.md (CONTRIBUTING.md) for how to report issues and submit pull requests (note that all PRs should target the `dev` branch).

This project follows a Code of Conduct (CODE_OF_CONDUCT.md).
